The Sustainability Monitoring Framework – Monitoring sustainability

Sustainability = sustainability of services

- 1) Functionality → Sustainability checks
- 2) Enabling environment → **SMF**

What is needed in order for the WASH services to be likely to be sustainable?

The Sustainability Monitoring Framework – 2 objectives

“We are working with FIETS already for many years, but now we really understand it.”

“SMF is to unpack the complexity of sustainability.”

The Sustainability Monitoring Framework & The Sustainability Index

WAI Sustainability framework

- Focus on outcomes
- Understanding of sustainability
- Programme and sector (monitoring) capacity

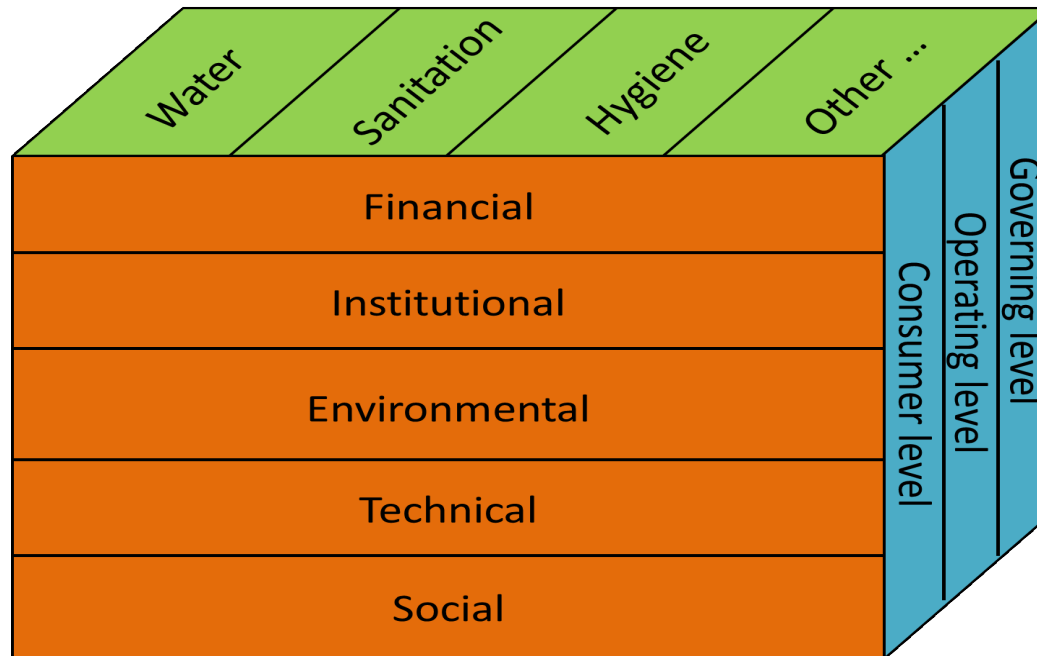

Measuring what?

Sustainability index

- Set of questions
- Visualized scores
- Measuring trend

Measuring how?

The Sustainability Index – 3-dimensional

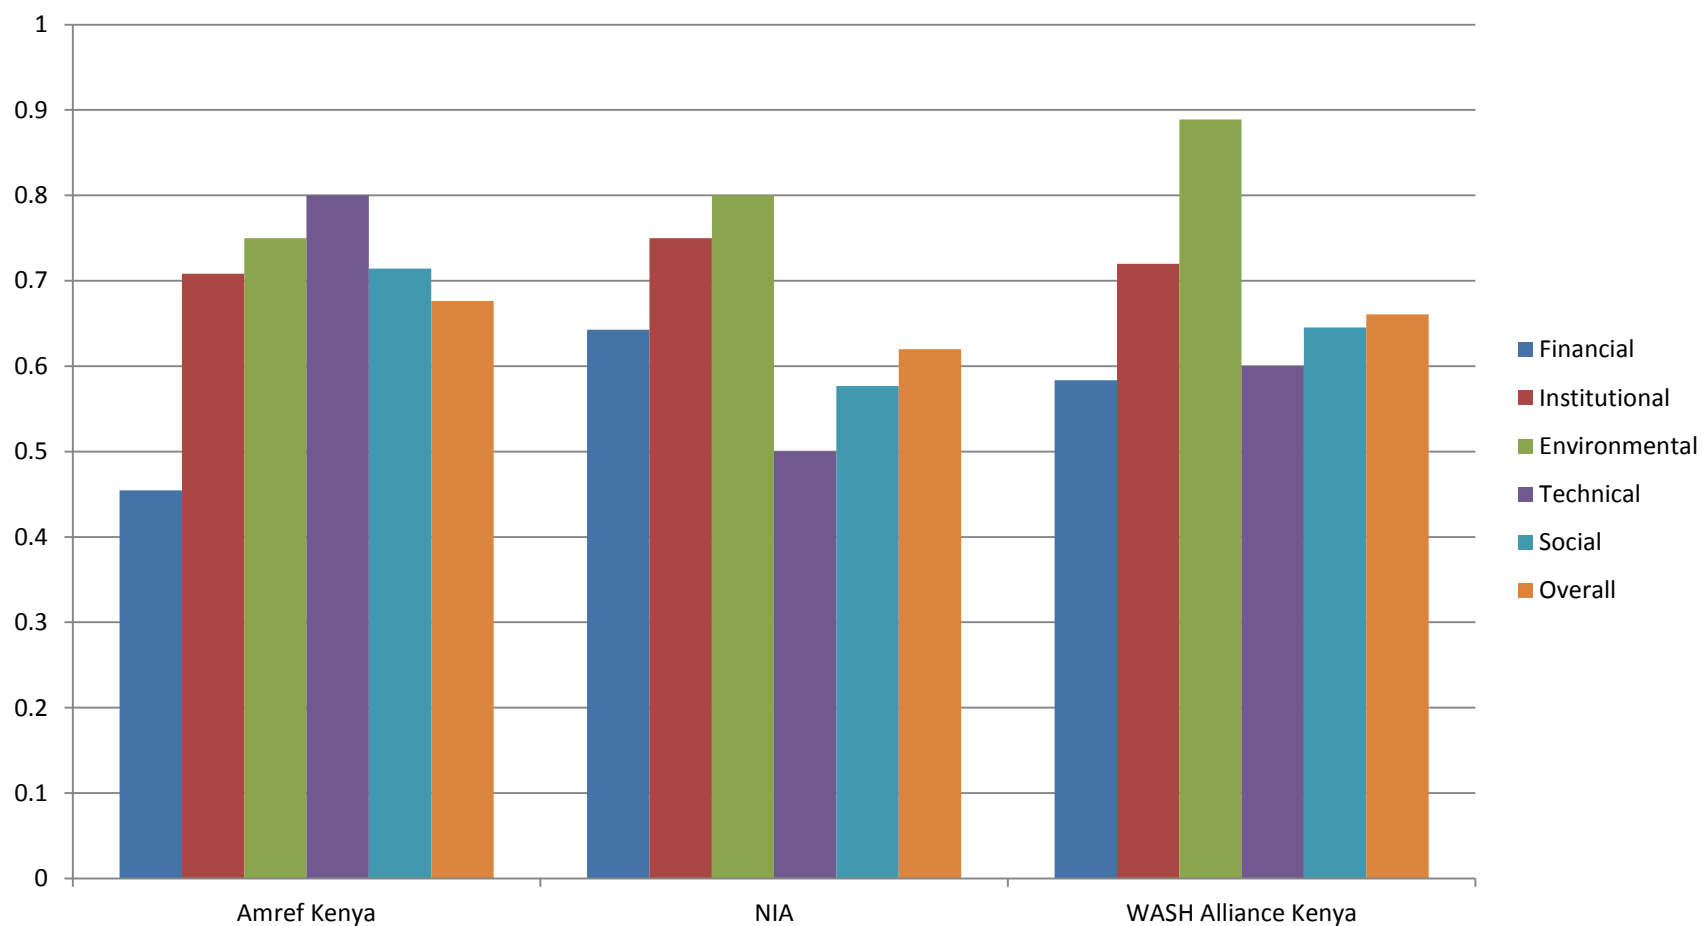

FIETS principles - institutional perspectives - content areas (rural)

The Sustainability Index – example of questions on sanitation

-  Is there a possibility to get a loan through microfinancing for a latrine? (*user level*)
-  Do you have Community Health Volunteers promoting sanitation in this village? (*operating level*)
-  Do you have an Eco-San latrine? (*user level*)
-  Are construction materials for 'improved' latrines available in the village (*operating level*)
-  Is there a sanitation policy with implementation guidelines on how to support the communities? (*government level*)

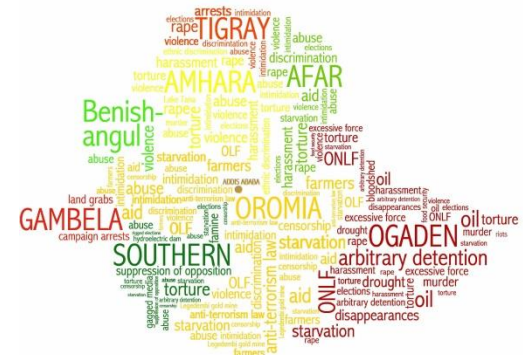

The Sustainability Index – Results from Kenya

The Sustainability Monitoring Framework – How to use the data?

The Sustainability Monitoring Framework – In Ethiopia WASH Alliance

The Sustainability Monitoring Framework – Thank you!
